

## Disease Prediction Report

Symptoms Provided: anxiety, chest\_pain, fast\_heart\_rate, vomiting

Allergy - 33.33% chance

Specialist: Allergist

Description: An allergy is an immune system response to a foreign substance that's not typically harmful to your body. They can include certain foods, pollen, or pet dander. Your immune system's job is to keep you healthy by fighting harmful pathogens.

-----

AIDS - 33.33% chance

Specialist: Osteopathic

Description: Acquired immunodeficiency syndrome (AIDS) is a chronic, potentially life-threatening condition caused by the human immunodeficiency virus (HIV). By damaging your immune system, HIV interferes with your body's ability to fight infection and disease.

-----

Paralysis (brain hemorrhage) - 16.67% chance

Specialist: Neurologist

Description: Intracerebral hemorrhage (ICH) is when blood suddenly bursts into brain tissue, causing damage to your brain. Symptoms usually appear suddenly during ICH. They include headache, weakness, confusion, and paralysis, particularly on one side of your body.

-----

Urinary tract infection - 16.67% chance

Specialist: Gynecologist

Description: Urinary tract infection: An infection of the kidney, ureter, bladder, or urethra.

Abbreviated UTI. Not everyone with a UTI has symptoms, but common symptoms include a frequent urge to urinate and pain or burning when urinating.
